Write a procedure that creates users from a list (table).
Before creating, you should check whether such a login exists.
To begin with, all users have the same password.
The solution in the form of a script put on the Platform Platon in: **solution_2023_04_06**

Help
Login List

```sql
select sp.name as login,
       sp.type_desc as login_type,
       sl.password_hash,
       sp.create_date,
       sp.modify_date,
       case when sp.is_disabled = 1 then 'Disabled'
            else 'Enabled' end as status
from sys.server_principals sp
left join sys.sql_logins sl
          on sp.principal_id = sl.principal_id
where sp.type not in ('G', 'R')
order by sp.name;
```
